AutoDrive Project Weekly Report - January 25th 2019

1. **Fails of the week**
   - Corrupted a raspberry pi image when backupping

2. **Successes of the week**
   - Met with our advisors
   - Created a backup image for the raspberry pi
   - Identify important project milestones

3. **Difficulties this week**
   - Identify a specific research topic related to autonomous vehicle using our prototype
     - How to come up with a meaningful application and demonstration of a particular function or behavior, in addition to just optimizing the response time and performance of the car

4. **Goals for next week**
   - Reevaluate initial research focus areas and determine one area that is achievable and impactful on both human factors and computer science sides
   - Reach out to other professors involved in the autonomous vehicle field to seek inspiration for a research direction
   - Meet with Ming regarding project updates and directions
